INTRODUCTION

IBIS Management System is a system that will be developed for managing the company account including manage the employees, finance part, task and job status and company report. By having this system it much easier for the human resources team to run it business in a organized way

- Manage Registration & Profile
- Manage Attendance
- Manage Claim
- Manage Invoice
- Manage Maintenance & Report

PROBLEM STATEMENT

- Efficient management of their workforce and documents.
- Employees had to fill out handwritten forms to confirm attendance.
- Filling out forms, scanning, and sending them to supervisors.
- Supervisors faced difficulties in downloading and reviewing the forms manually.
- Employees frequently contacted information on available positions, causing delays and confusion.
- Challenges accessing employee information, including crucial bank details
- Check individual forms for overtime work manually.

SCOPE

- This system will be used by IBIS Company employees only.
- There are five modules in this system whose primary purpose is to serve users.
- The IBIS company itself is the source of all information pertaining to this system.
- This system will be developed as a web-based system.
- The structure of this system will be discussed between the developers and IBIS management staff.

AIMS AND OBJECTIVE

The aim of the IBIS-ms is to enhance efficiency and productivity by streamlining and automating processes. It seeks to optimize resource allocation, minimize manual tasks, and improve overall operational effectiveness.

- To design the solution to a IBIS-ms management system.
- To develop a web-based system called IBIS Services Management System.
- To test a IBIS-ms system with many functions that can be used by IBIS Company.

METHODOLOGY

CONCLUSION

In summary, all the requirements and modules of the system have been successfully developed. The main objective of this system is to achieve success by meeting the agreed-upon scope defined by the end user. The system will be utilized according to the agreed-upon scope, ensuring that it fulfills the intended purpose and meets the needs of the end user.
